

Recycling 102

In Recycling 101, you learned what recycling is, why you should recycle and how recycling works.

Well, how are we doing in South Carolina? What are the state's recycling and waste reduction goals? What are the recycling numbers? What's the recycling rate?

Those should be easy questions to answer, right? Well, nothing is easy. Not even the measuring and reporting of the recycling rate and numbers. Here are two things to remember. First, there are all kinds of waste. Second, no matter how many kinds of waste there are, there is a total amount of waste generated.

South Carolina – like all states – measures many kinds of waste. But the state's recycling rate is measured only from the total amount of municipal solid waste (MSW) generated.

What is MSW? MSW has many definitions throughout the nation. In South Carolina, however, MSW is defined as the combined residential, commercial, institutional/non-profit and industrial packaging/office waste generated. This includes paper, cans, bottles, food scraps, yard trimmings, packaging and other items.

What are South Carolina's recycling and waste reduction goals?

The S.C. Solid Waste Policy and Management Act of 1991 (Act) originally set a statewide recycling goal of 25 percent and a goal of reducing the amount of waste disposed of at MSW landfills and incinerators by 30 percent. Both rates are calculated by weight. Both goals were measured from the **total** amount of waste generated – not just MSW. Both goals were measured using FY 1993 numbers as a baseline and were to be met by FY 1997. Both goals were met.

The Act was amended in October 2000 to reflect new recycling and waste reduction goals. The recycling goal was changed to 35 percent of the MSW stream is to be met by FY 2005. The waste reduction goal was changed to a goal to reduce the amount of MSW disposed of to 3.5 p/p/d – also to be met by FY 2005. By comparison, the U.S. EPA's recycling goal for the nation is to recycle 35 percent of the MSW generated by 2005 and reduce MSW disposed of to 4.3 p/p/d by 2005.

What is South Carolina's current recycling rate?

The amount of MSW generated in fiscal year (FY) 2005 (July 1, 2004 – June 30, 2005) was 4.6 million tons according to the S.C. Solid Waste Management Annual Report for FY 2005. Of this amount, 1.22 million tons were recycled resulting in a recycling rate of 26.2 percent for the state.

Overall, South Carolinians recycled on average 1.6 pounds of material per person per day (p/p/d).

How does South Carolina compare nationally? The amount of MSW generated nationwide was 236 million tons in 2003 (the latest numbers available) according to the U.S. Environmental Protection Agency (U.S. EPA). Of that amount, about 72 million tons (about 30 percent) were recycled. Americans recycled on average about 1 p/p/d.

Where do the 'numbers' come from to determine the state's recycling rate?

The Act requires county governments to report annually to the S.C. Department of Health and Environmental Control (DHEC) the amount of MSW recycled within their county. DHEC also receives reports from permitted MSW landfills, transfer stations and incinerators indicating the amount of waste disposed of.

Used Oil Recycling

Used oil also is a part of MSW and is included in the state's measured recycling rate. South Carolina has one of the nation's top and most comprehensive used oil recycling programs targeting do-it-yourself (DIYers) oil changers. In 2004 (the latest year figures were available), DIYers recycled more than 1.1 million gallons of used oil, the sixth consecutive year more than 1 million gallons were collected. Overall, DIYers have recycled more than 11 million gallons of used oil since 1990.

Total Solid Waste Recycled

While South Carolina narrowly defines what can be included in its measured recycling rate, it also is worth noting the total amount of solid waste kept out of S.C.

landfills. More than 6.3 million tons, or 45 percent of the total solid waste generated, was recycled in FY05. That figure is up from last year's total recycling rate of 41.5 percent. The 6.3 million tons recycled reflects an increase of 26 percent.

Of the 6.3 million tons of total solid waste that were recycled, the majority was process or manufacturing waste – scraps or by-products – that are put back into the process or taken off site for recycling. Either way, the impact of keeping such material out of landfills is tremendous.

The benefits extend beyond the environment and also include economic gains for the industry. It is often cheaper for industry to recycle than to dispose of materials, thereby impacting the bottom line. In addition, this further extends the life of landfills and avoids having to construct new ones.

What was RECYCLED in South Carolina?*
FY05 – Measured in Tons – MSW Only

COMMODITY	AMOUNT COLLECTED
Glass	10,406 tons
Metal	284,874 tons
Paper	397,751 tons
Plastic	20,725 tons
Banned Items ¹	439,217 tons
Miscellaneous Items ²	69,125 tons
TOTAL	1,222,098 TONS

1. Banned items include the following: appliances; lead-acid batteries; tires; used motor oil from do-it-yourself oil changers; and yard trimmings.
2. Miscellaneous items include: antifreeze; consumer electronics; cooking oil; fluorescent bulbs; food scraps (post-consumer only); household hazardous materials; paint; rechargeable batteries; textiles; used oil filters; wood packaging; other wood (such as furniture and cabinets); and other non-packaging products.

MSW Recyclables Collected by Percentage* **

1. Banned items include the following: appliances; lead-acid batteries; tires; used motor oil from do-it-yourself oil changers; and yard trimmings.
2. Miscellaneous items include: antifreeze; consumer electronics; cooking oil; fluorescent bulbs; food scraps (post-consumer only); household hazardous materials; paint; textiles; used oil filters; wood packaging; other wood (such as furniture and cabinets); and other non-packaging products.
